VALUES

What we wanted **MASCAR** to be has been simple and clear from the very beginning. Today we can proudly affirm that we became what we dreamed of, even though we continually build on our success with a firm commitment to self-improvement.

We love to offer the best solutions to our **customers** needs, which are, in fact, what more matters to us. That is why we always aim at the maximisation of our machines **quality-price ratio** and why we put the best care and attention in both our **post sales** and **technical services**.

MISSION

We have also always been active in the innovation process: to us **product developing** means reliability and efficiency, especially when flanked by an **high quality control** system.

The accuracy we put in operations such as assembling, laser cutting, bending, welding and painting our equipment and the automatization of the spare parts warehouse make our product **trustable** and reduce our lead time, granting the best **satisfaction** of our customers.

what we
DO

ROUND BALERS

Choosing the perfect round baler is a very important decision to make. Our goal is to simplify this choice by providing machines designed to suit our specific customer needs. We offer a wide range of solutions suitable for everybody: from the small to the large agricultural company or contractor.

WRAPPERS

A good wrapping grants quality and health of the breeding, representing an essential contribution to our customers activities. That is why our wide range of mounted and trailed wrappers offers both consistency and durability.

HAYMAKING

PRECISION PLANTERS

We produce monoseed planters for every seed type, developing new modern solutions for different field surfaces. Our flexibility in production planning, especially when it comes to the seeding area, is the key feature that allows us to meet any customer request, in every part of the world.

MECHANIC PLANTERS

Our range of mechanical and pneumatic seed drills for cereals and small seed has been designed to meet different needs, always guaranteeing reliability and precision in the dosage of the seed.
